Prices for Mutual Funds are not updated until after market close (typically around 7pm ET).

The Market Value Change is the difference between the most recent market value and the previous day market value. Market Value is the product of Quantity and Last Price. For Mutual Funds, the most recent Market Value Change is retained throughout the day until prices are updated in the evening, typically around 7pm ET. MV Change for Fixed Income holdings occurs only when there is an intraday purchase or sale.

Real Time or delayed pricing is for domestic equities, domestic ETFs and options only. Pricing of other positions is as of the previous day's close, or the most recently available price. Positions are priced as of the last trade. The current bid or ask may be different from the price displayed.

The value of any non-dollar denominated holding used in calculating the balances fields is first converted in to a U.S. Dollar Equivalent (USDE) amount. The USDE amount is calculated by multiplying the previous day's closing price for the holding in its native currency by the previous day's closing spot (conversion) rate as determined by Pershing from sources it deems to be reliable. If the previous day's closing price is not available, then the most recent closing price available for the holding will be used.

Securities pricing may vary from actual liquidation value. Prices shown should only be used as a general guide to portfolio value. Your printed confirmations and statements are the official records of your account.
