Asset Allocation Details

The 'Account Allocation' column is how your current account balance is invested. The future Contribution Allocation column shows the latest investment elections you made regarding future contributions. You should periodically compare your Account Allocation to your Future Contribution Allocation to determine if the investment options and categories in your Account Allocation continue to reflect your investment objectives. To help achieve long-term retirement security, you should give careful consideration to the benefits of a well-balanced and diversified investment portfolio. Spreading your assets among different types of investments can help you achieve a favorable rate of return, while minimizing your overall risk of losing money. This is because market or other economic conditions that cause one category of assets, or one particular security, to perform very well often cause another asset category, or another particular security, to perform poorly. If you invest more than 20% of your retirement savings in any one company or industry, your savings may not be properly diversified. Although diversification is not a guarantee against loss, it is an effective strategy to help you manage investment risk. In deciding how to invest your retirement savings, you should take into account all of your assets, including any retirement savings outside of the Plan. No single approach is right for everyone because, among other factors, individuals have different financial goals, different time horizons for meeting their goals, and different tolerances for risk. It is also important to periodically review your investment portfolio, your investment objectives, and the investment options under the Plan to help ensure that your retirement savings will meet your retirement goals. For more information on individual investing and diversification of your account, please log on to the United States Department of Labor's website at www.dol.gov/agencies/ebsa/faqs-and-regulations/faqs/pension-protection-act/investing-and-diversification

Fund results from a long-term perspective

We believe investing should have a long-term focus and that one year is not long-term. Therefore, results should be measured over meaningful periods of time. Below, you will find the funds' average annual total returns for periods ended 12/31/25, reflecting the deduction of the maximum sales charge.

	Class inception date	Class lifetime	10 years	5 years	1 year	Expense ratio
Growth Portfolio-529A	5/18/12	12.46%	12.01%	9.26%	16.24%	0.77%
Growth Portfolio-529C	5/18/12	12.42	11.98	9.20	19.48	1.52

Fund results above are preliminary and may be subject to change. Figures shown are past results for the funds and are not predictive of results in future periods nor do they reflect your personal rate of return. Current and future results may be lower or higher than those shown. Share prices and returns will vary, so investors may lose money. Investing for short periods makes losses more likely. Fund results for Class A shares reflect the deduction of the maximum sales charge of up to 5.75% for equity, Target Date, Retirement Income and most Portfolio Series funds; up to 3.75% for most fixed income and interval funds; and up to 3.50% for Class 529-A and ABLE-A shares. There is no sales charge for AF U.S. Government Money Market Fund Class A shares. Results for other share classes are at net asset value. If a sales charge had been deducted, results would have been lower. Investment results assume all distributions are reinvested and reflect applicable fees and expenses. For current information, including month-end results, results that reflect the impact of sales charges and results for Class A shares at net asset value, please visit capitalgroup.com. Expense ratios are as of each fund's most recent prospectus. Expense ratios reflect any applicable fee waivers or expense reimbursements. Please see the fund's most recent shareholder report or prospectus for details. Investment results reflect the waivers and/or reimbursements, without which they would have been lower. Results for share classes prior to the date of first sale are hypothetical based on Class A share results without a sales charge, adjusted for estimated annual expenses. Results for certain funds also include hypothetical returns because those funds' shares sold after the funds' date of first offering. Fund lifetime results are based on the inception date of Class A shares. Please see capitalgroup.com for more information on specific expense adjustments and the actual dates of first sale for each fund and share class.
